

AN ENTERPRISE SOFTWARE PLATFORM

Strengthening Translation Quality Assurance with AI-Powered Verification

The Platform

A global provider of cloud-based enterprise software with a high-volume multilingual content program, operating in a fast-moving environment where accuracy and consistency directly impact user trust.

The Need

Greater confidence in translation quality across an established MTPE and TMS workflow, with a practical way to identify issues traditional QA can miss, measure performance, and demonstrate the value of AI-supported quality assurance.

The customer had a strong internal focus on advancing AI usage. Working with Vistatec AI includes how we work in practice and how outcomes could be measured and summarized for executive visibility.

Vistatec Solution

Vistatec introduced **VistatecVerifier** as an additional linguistic verification layer supporting human review.

Using representative content, Vistatec demonstrated how Verifier identifies issues traditional QA tools may miss and compared its coverage against existing QA processes.

The solution adds measurable, configurable quality checks while keeping expert human judgment central to final decisions.

Key Facts

- Additional QA layer integrated into existing workflows
- AI-supported, human-verified approach
- Identifies accuracy, modality, and language
- Provides measurable QA coverage for stakeholder reporting
- Roadmap extends to terminology, tone, and compliance checks
